What are the Risks?

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: **Chinese Market risk:** In addition to typical risks linked to Emerging Markets, investments in China are subject to economic, political, tax and operational risks specific to the Chinese Market. Please also refer to the prospectus for China QFII risk, Bond Connect risk and Shanghai-Hong Kong Stock Connect and Shenzhen-Hong Kong Stock Connect risk. **Emerging markets risk:** the risk related to investing in countries that have less developed political, economic, legal and regulatory systems, and that may be impacted by political/economic instability, lack of liquidity or transparency, or safekeeping issues. **Foreign Currency risk:** the risk of loss arising from exchange-rate fluctuations or due to exchange control regulations. **Liquidity risk:** the risk that arises when adverse market conditions affect the ability to sell assets when necessary. Such risk may be triggered by (but not limited to) unexpected events such as environmental disasters or pandemics. Reduced liquidity may have a negative impact on the price of the assets. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

Glossary

Ongoing Charges Figure (OCF): The Ongoing Charges Figure (OCF) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The OCF is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The OCF does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the prospectus. For recent all-in annual costs, as well as hypothetical performance scenarios that show the effects that different levels of return could have on an investment in the fund, where applicable, see the KID. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Cash Flow:** Supplements price/earnings ratio as a measure of relative value for a stock. For a portfolio, the value represents a weighted average of the stocks it holds. **Standard Deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
